

GRAV Store Employee Quick Help

Find an answer and complete one task without reading the full handbook

This guide is for employees who need to complete Store and Purchase work quickly and correctly. It is not designed to be read from beginning to end. Start with your question, role or current screen, then open only the task card you need.

The screenshot shows the 'STORE & PURCHASE Overview' screen. It features a top navigation bar with icons for Overview, Requests, Purchase, Receive, Inventory, Masters, Reports, Settings, and Legacy & production. Below the navigation bar, the 'Needs attention' section shows 'Nothing is waiting on the stock'. The 'Purchasing' section includes 'Requests to review', 'Active supplier quotations', 'Orders to issue', and 'Expected to receive'. The 'Receiving & stock' section includes 'Receipts to inspect', 'Put-away pending', 'Reservation shortages', 'Ready to pick', 'Partly issued', 'Service acceptance', and 'Stock counts to finish'. Numbered callouts 1-4 point to specific tasks: 1. 'Nothing is waiting on the stock', 2. 'Requests to review', 3. 'Receipts to inspect', and 4. 'Put-away pending'.

Start the shift from Overview

- 1 Read Needs attention before opening routine registers.
- 2 Use the Purchasing cards to open the correct filtered queue.
- 3 Use Receiving and stock for inspections, put-away and reservations.
- 4 Use the Open action on the relevant card to enter its filtered queue.

Daily rule

Search first, verify the exact business record, perform one controlled action, then confirm the resulting status or movement.

Detailed policy and unusual cases remain in the GRAV Store and Purchase Complete User Guide.

Find an answer in 30 seconds

Use whichever starting point matches what you know. Word search and the Navigation pane work throughout this guide.

What you know	What to do	Example
Your goal	Search the verb or object, then open the matching task card.	receive, return, supplier, count, valuation
Your role	Open My work by role and follow only your normal queue.	requester, buyer, receiver, inventory controller
Your current screen	Search the visible page title exactly as it appears.	Goods receipts, Stock exceptions, Materials
An error message	Search a distinctive phrase from the message and use Problem to action.	unit conversion, insufficient stock, staff record
A document number	Open the owning register and search the exact number.	request, PO, receipt, service order

Do not browse module names at random

- A new need always begins in Request desk, not in a legacy register.
- Physical goods use Purchase orders and Goods receipts.
- Non-stock work uses Service orders and requester acceptance; it creates no stock.
- Quantity changes belong to receiving, issue, return, transfer, count or correction workflows - not master forms.
- Budget mapping and Accounting actuals are connected controls, not fields employees should invent while handling stock.

Goal index

I want to	Open	Search words
See what needs attention	Card 01 Overview	shift, urgent, queue
Find an approved need	Cards 02 to 04	request, required items, classify
Issue or return material	Cards 05, 06 and 12	issue, return, credit stock
Buy physical goods	Cards 07 and 08	purchase order, supplier, PO
Receive and inspect goods	Card 09	receipt, GRN, quarantine, reject
Order and accept a service	Card 10	service order, completion, rework
Reserve or pick stock	Card 11	reservation, available, picked
Count or investigate stock	Cards 13 to 15	count, movement, exception
Print a traceable label	Card 16	lot, barcode, label
Find or create master data	Cards 17 to 25	material, product, supplier, offer, unit, warehouse
Read operational reports	Cards 26 to 29	request report, movement, exception, value
Change Store settings	Card 30	address, PDF, settings
Find historical purchase forms	Card 31	legacy, old purchase form, history

Card numbers in this guide are stable lookup identifiers. Search CARD plus the two-digit number, or search the page title shown in the Open column.

My work by role

Role	Start here	Normal work	Stop and escalate when
Requester	Request desk	Raise and follow a need; provide purpose and required date; accept completed services.	The request identity, quantity or service result is wrong.
Approver	Request detail	Confirm business need, timing and scope; approve or refuse with a reason.	Evidence, authority or budget result is unclear.
Buyer	Request desk / Purchase orders	Source approved demand; compare offers; prepare and issue supplier documents.	Supplier, unit, tax, price or budget evidence is incomplete.
Store receiver	Overview / Goods receipts	Match arrival to PO; record quantity and condition; quarantine or put away.	PO line, unit, location or condition cannot be verified.
Inventory controller	Reservations / Counts / Exceptions	Reserve, pick, issue, return, count and resolve evidence breaks.	A correction would require editing posted history or making stock negative.
Manager	Overview / Reports	Prioritise queues, review exceptions and confirm handoffs have owners.	Operational and financial records disagree without evidence.
Finance reader	Valuation / source documents	Read management value with coverage; match commercial and accounting evidence.	Missing evidence is being treated as zero cost.
Administrator	Masters / Settings	Maintain controlled identities, units, locations and future defaults.	A change could rewrite or misclassify historical work.

Start and finish the shift

Start of shift

- Open Overview and read Needs attention before routine registers.
- Open the highest-priority filtered queue from its card.
- Check receipts awaiting inspection, put-away pending, reservation shortages and stock exceptions.
- Read yesterday's unresolved notes and confirm ownership before creating new work.

Before every stock-changing action

- Verify document number, item, variant, quantity, unit and physical location.
- Confirm the screen's action matches the real event: receive, reserve, pick, issue, return, transfer, count or correct.
- Submit once. If the response is uncertain, refresh and inspect history before trying again.

End of shift

- No accepted receipt remains without a known location unless it is deliberately quarantined.
- Picked material is either issued, returned to usable stock or left with a named owner.
- Open counts and unresolved exceptions have a reason and next owner.
- The physical handover agrees with the system's visible queues.

CARD 01 Start the shift from Overview

Open: Overview

Use this when: At the start of a shift or whenever you need to decide what requires attention next.

The screenshot shows the 'Overview' page of the GRAV Store Employee system. The page is divided into several sections: 'Needs attention', 'Purchasing', and 'Receiving & stock'. The 'Needs attention' section has a 'Nothing is waiting on the line' message. The 'Purchasing' section contains cards for 'Requests to review', 'Active supplier quotations', 'Orders to issue', 'Expected to receive', and 'Put-away pending'. The 'Receiving & stock' section contains cards for 'Receipts to inspect', 'Reservation shortages', 'Partly issued', 'Ready to pick', 'Service acceptance', and 'Stock counts to finish'. Each card has an 'Open' button. Numbered callouts 1-4 point to specific elements: 1 points to the 'Needs attention' section, 2 points to the 'Requests to review' card, 3 points to the 'Receipts to inspect' card, and 4 points to the 'Open' button on the 'Put-away pending' card.

Start the shift from Overview

- 1 Read Needs attention before opening routine registers.
- 2 Use the Purchasing cards to open the correct filtered queue.
- 3 Use Receiving and stock for inspections, put-away and reservations.
- 4 Use the Open action on the relevant card to enter its filtered queue.

Steps: 1. Read Needs attention before opening routine registers. 2. Use the Purchasing cards to open the correct filtered queue. 3. Use Receiving and stock for inspections, put-away and reservations. 4. Use the Open action on the relevant card to enter its filtered queue.

Expected result: You enter the correct filtered queue and know which work owns the next action.

If blocked: If a card and its register disagree, refresh once and use the register as the working record.

CARD 02 Review approved demand in Request desk

Open: Requests > Request desk

Use this when: An approved material or service need must be reviewed and routed to stock, purchase or service fulfilment.

Request desk

Needs Store action: 11 | Ready to issue: 0 | Purchase / service in progress: 0 | Completed or closed: 1 | Requests shown: 17

STAGE: Needs action (11) | In progress | Completed | All requests

TYPE: All types | Material requests | Manufacturing | Purchase or service | Item addition requests - legacy

Search number, requester, reason...

TYPE	NUMBER	REQUESTER	STATUS	DETAILS	DATE	VIEW
Manufacturing requirement	REQ-2026-0042	Northstar Buying Services Test	Salvo Approved	Not Issued Yet	06 Sept 2026	View
Manufacturing requirement	REQ-2026-0041	GRAV PVT LTD	Salvo Approved	Not Issued Yet	02 Sept 2026	View
Manufacturing requirement	REQ-2026-0040	GRAV PVT LTD	Salvo Approved	Not Issued Yet	01 Sept 2026	View
Manufacturing requirement	REQ-2026-0039	Northstar Buying Services Test	Salvo Approved	Not Issued Yet	01 Sept 2026	View
Manufacturing requirement	REQ-2026-0037	Grav Sampling Order	Salvo Approved	Not Issued Yet	01 Sept 2026	View
Manufacturing requirement	REQ-2026-0036	Amiya Mahapatra	Salvo Approved	Not Issued Yet	28 Aug 2026	View
Manufacturing requirement	REQ-2026-0033	chrimay nayak	Salvo Approved	Not Issued Yet	27 Aug 2026	View
Manufacturing requirement	REQ-2026-0012	Mayfair garden	Salvo Approved	Not Issued Yet	10 Aug 2026	View
Manufacturing requirement	REQ-2026-0011	MAYFAIR CORPORATE BBSR	Salvo Approved	Items Issued	03 Aug 2026	View

Review approved demand in Request desk

- 1 Use the stage cards to understand the queue before filtering.
- 2 Filter by workflow stage and request type; search by number or requester.
- 3 Read type, requester, status and fulfilment result on each row.
- 4 Choose View to inspect and classify the exact request.

Steps: 1. Use the stage cards to understand the queue before filtering. 2. Filter by workflow stage and request type; search by number or requester. 3. Read type, requester, status and fulfilment result on each row. 4. Choose View to inspect and classify the exact request.

Expected result: The correct request is open and its fulfilment path is visible.

If blocked: If the request is missing, verify company, date, requester and stage before escalating.

CARD 03 Inspect a request before acting

Open: Requests > Request desk > View request

Use this when: Before reserving, issuing, buying or ordering a service against a request.

The screenshot shows a web application interface for managing requests. At the top, there's a navigation bar with various icons and a search bar. Below it, the main header displays 'Northstar Buy Services Test' and 'Received 08 Sept 2020'. A sub-header shows 'Order Request / REQ-2020-0042'. The main content area has four tabs: 'Customer Information', 'Work Orders', 'Required Items', and 'Raw Item Lists'. The 'Work Orders' tab is active, showing a table with columns: 'WO #', 'PRODUCT', 'VARIANT', 'QTY', and 'STATUS'. The first row in the table shows 'WO-EdictaleneTefect7Feb1902bd', 'Souraya Tablet', 'Colour: Grey', '6', and 'Pending'. To the right of the table, there are buttons for 'View WO' and 'Approve'. The interface also includes a sidebar on the left with navigation links and a top bar with various icons.

Inspect a request before acting

- 1 Confirm request identity, customer and received date.
- 2 Use the tabs to review work orders and required material.
- 3 Read product, variant, quantity and current status.
- 4 Approve only the intended work order; Issue Stock is a separate operation.

Steps: 1. Confirm request identity, customer and received date. 2. Use the tabs to review work orders and required material. 3. Read product, variant, quantity and current status. 4. Approve only the intended work order; Issue Stock is a separate operation.

Expected result: Every action is based on the request's current approval, identity and required date.

If blocked: If actions are hidden, check status and role; do not use another person's sign-in.

CARD 04 Check required material lines

Open: Request detail > Required Items

Use this when: The request contains product demand that must be translated into exact material and variant requirements.

Check required material lines

- 1 Open Required Items from the request tabs.
- 2 Use Aggregated totals or Per-product breakdown for the question you need to answer.
- 3 Wait for the requirement calculation to finish before interpreting quantities.
- 4 If calculation remains stuck, refresh the request instead of acting on an incomplete view.

Steps: 1. Open Required Items from the request tabs. 2. Use Aggregated totals or Per-product breakdown for the question you need to answer. 3. Wait for the requirement calculation to finish before interpreting quantities. 4. If calculation remains stuck, refresh the request instead of acting on an incomplete view.

Expected result: Requested descriptions point to the correct material, variant, quantity and unit.

If blocked: If calculation remains incomplete, refresh the request and do not act on partial quantities.

CARD 05 Record stock leaving Store

Open: Request detail > Issue Stock

Use this when: Approved material is physically leaving Store for a known request or work context.

Record stock leaving Store

- 1 Confirm the Issue Stock title and request number.
- 2 Search and add the exact material and variant being issued.
- 3 Enter a business reason for the stock leaving Store.
- 4 Review the line details, then use Submit Issue once.

Steps: 1. Confirm the Issue Stock title and request number. 2. Search and add the exact material and variant being issued. 3. Enter a business reason for the stock leaving Store. 4. Review the line details, then use Submit Issue once.

Expected result: One traceable stock-out is recorded against the correct request.

If blocked: If stock or a conversion is missing, stop; correct availability or master data first.

CARD 06 Return unused issued material

Open: Request detail > Return Stock

Use this when: Unused material previously issued is physically returning to Store.

Return unused issued material

- 1 Confirm the Return Stock title and original request number.
- 2 Search and add only material physically returning to Store.
- 3 Explain why the material is returning.
- 4 Review the line details, then use Submit Return once.

Steps: 1. Confirm the Return Stock title and original request number. 2. Search and add only material physically returning to Store. 3. Explain why the material is returning. 4. Review the line details, then use Submit Return once.

Expected result: Returned quantity reaches the correct usable or non-usable location with a reason.

If blocked: If the original issue cannot be identified, do not credit an arbitrary item.

CARD 07 Monitor physical-goods purchase orders

Open: Purchase > Purchase orders

Use this when: You need to find, monitor, issue, receive against or investigate a physical-goods order.

The screenshot displays the 'Purchase orders' interface. At the top, there's a navigation bar with 'Purchase orders' selected. Below it, a 'New purchase order' button is highlighted with a blue circle and the number 1. The main content area is divided into three columns: 'Orders in this company', 'Value of all orders', and 'Payment state across the company'. Each column contains a table of status counts, with the first column highlighted by a blue circle and the number 2. Below these tables is a search bar with the placeholder 'Order number, supplier or item...' and a dropdown menu for 'Any supplier', both highlighted by a blue circle and the number 3. At the bottom, a message box states 'No purchase orders yet' with a link to 'Create the first purchase order', highlighted by a blue circle and the number 4.

Monitor physical-goods purchase orders

- 1 Use New purchase order only after demand and budget gates are ready.
- 2 Read company-wide status counts separately from filtered rows.
- 3 Filter by status, supplier or search term.
- 4 When orders exist, open one from this register to issue, receive, amend or review history.

Steps: 1. Use New purchase order only after demand and budget gates are ready. 2. Read company-wide status counts separately from filtered rows. 3. Filter by status, supplier or search term. 4. When orders exist, open one from this register to issue, receive, amend or review history.

Expected result: The order and its next operational action are identified.

If blocked: If an issued order is wrong, use the supported amendment or cancellation path; do not overwrite history.

CARD 08 Create a purchase-order draft

Open: Purchase > Purchase orders > New purchase order

Use this when: Approved demand is ready to become a supplier-facing order for physical goods.

The screenshot shows the 'Create Purchase Order' form in a web application. The form is titled 'Create Purchase Order' and has a 'Clear' button. It includes sections for 'Order Date' (06/09/2026), 'Vendor #1' (with a search bar and 'Expected Delivery' date), 'Payment Terms' (e.g., Net 30, 50% Advance), 'Items' (a table with columns for item name, quantity, unit, and rate), 'Taxes' (a table with columns for tax name, rate, and amount), 'Notes' (a text area), and 'Terms & Conditions' (a dropdown menu). The form is divided into two main sections: 'Vendor #1' and 'Items'. The 'Vendor #1' section includes fields for 'Vendor #1', 'Expected Delivery', and 'Payment Terms'. The 'Items' section includes a table with columns for 'Item Name', 'Quantity', 'Unit', and 'Rate'. The 'Taxes' section includes a table with columns for 'Tax Name', 'Rate', and 'Amount'. The 'Notes' section includes a text area. The 'Terms & Conditions' section includes a dropdown menu. The form is annotated with five numbered steps: 1. Confirm order date and purchasing context. 2. Choose the approved supplier and expected-delivery terms. 3. Add exact items, quantities, units and rates. 4. Review taxes, charges and vendor total. 5. Review notes and terms below, then save as Draft; issue only after approval.

Create a purchase-order draft

- 1 Confirm order date and purchasing context.
- 2 Choose the approved supplier and expected-delivery terms.
- 3 Add exact items, quantities, units and rates.
- 4 Review taxes, charges and vendor total.
- 5 Review notes and terms below, then save as Draft; issue only after approval.

Steps: 1. Confirm order date and purchasing context. 2. Choose the approved supplier and expected-delivery terms. 3. Add exact items, quantities, units and rates. 4. Review taxes, charges and vendor total. 5. Review notes and terms below, then save as Draft; issue only after approval.

Expected result: A reviewable draft exists; issuing remains a separate controlled decision.

If blocked: If demand, supplier, budget or unit evidence is incomplete, keep the order in Draft.

CARD 09 Receive goods against the purchase order

Open: Receive > Goods receipts

Use this when: Goods have arrived against a purchase order and require quantity and condition recording.

The screenshot shows the 'Goods receipts' page in a software application. The page has a top navigation bar with tabs like Overview, Requests, Purchase, Receive, Inventory, Masters, Reports, Settings, and Legacy & production. Below the navigation bar, there's a section titled 'Goods receipts' with a subtitle: 'Numbered goods receipts and their operational stage. Open one to inspect it, quarantine or reject stock, and put accepted stock away. Neither inspection nor put-away changes the company's total on-hand.' There's a 'Refresh' button. Below that, a search bar is labeled 'Search' with a placeholder 'GRL, PO, supplier or invoice'. To the right of the search bar are filters for 'Stage' (set to 'All stages') and date ranges 'From' and 'To' (both set to 'dd/mm/yyyy'). Below the search bar, there's a message: 'No goods match' followed by a note: 'When goods arrive against a purchase order, record a goods receipt from the order's Receive action. It will appear here.' Four numbered callouts are present: 1 points to the 'Goods receipts' title; 2 points to the search bar; 3 points to the 'No goods match' message; 4 points to the 'Stage' filter.

Receive goods against the purchase order

- 1 Use this register for numbered goods receipts created against purchase orders.
- 2 Use search and status filters to find the exact receipt.
- 3 When a receipt row exists, open it to inspect, quarantine, reject or put away stock.
- 4 Use Deliveries only for older order-level records; new receipts belong here.

Steps: 1. Use this register for numbered goods receipts created against purchase orders. 2. Use search and status filters to find the exact receipt. 3. When a receipt row exists, open it to inspect, quarantine, reject or put away stock. 4. Use Deliveries only for older order-level records; new receipts belong here.

Expected result: Accepted, quarantined and rejected quantities remain separate and traceable.

If blocked: If the PO line, unit or location is unclear, quarantine or pause instead of guessing.

CARD 10 Track non-stock service work

Open: Purchase > Service orders

Use this when: Non-stock work is issued to a supplier and must be followed through completion and requester acceptance.

The screenshot shows the 'Service orders' page in a software application. The page has a top navigation bar with various icons and a search bar. Below the navigation bar, there's a section titled 'Service orders' with a subtitle 'Approved service requests, issued to a supplier and accepted by the requesting department, for goods receipt or stock movement is created.' Below this, there are tabs for 'Draft', 'Issued', 'In progress', 'Completion reported', 'Accepted', 'Rework required', and 'Cancelled'. A search bar is located to the right of these tabs. Below the tabs, there's a message: 'No service orders yet. An approved service request requires a service order here.' Four numbered callouts point to specific elements: 1 points to the 'Accepted' tab, 2 points to the search bar, 3 points to the subtitle, and 4 points to the 'No service orders yet' message.

Track non-stock service work

- 1 Use status tabs to follow Draft through Accepted or Rework required.
- 2 Search by order, request or supplier.
- 3 A service order never creates a goods receipt or stock movement.
- 4 When completion is reported, the requester—not Store—accepts or asks for rework.

Steps: 1. Use status tabs to follow Draft through Accepted or Rework required. 2. Search by order, request or supplier. 3. A service order never creates a goods receipt or stock movement. 4. When completion is reported, the requester—not Store—accepts or asks for rework.

Expected result: Accepted service evidence is ready for Accounting without creating stock or a goods receipt.

If blocked: If completion cannot be accepted, the requester should ask for rework with a reason.

CARD 11 Reserve, pick and issue material

Open: Inventory > Reservations and picking

Use this when: Approved demand should be promised, picked and then issued from usable stock.

The screenshot shows the 'Reservations & picking' interface. At the top, there are stage cards for 'Ready to reserve', 'Partly reserved', 'Ready to pick', 'Partly issued', 'Backordered', 'Reservation required', and 'Completed'. Below these are filter fields for 'Search', 'Stage', 'Department', 'Warehouse', 'Status', and 'Required by'. The main area shows 'Nothing in the queue' with a message: 'No approved demand or reservations match these filters. Consider the stage filter, the warehouse or status filters.' Numbered callouts point to: 1. The stage cards, 2. The filter fields, 3. The 'Nothing in the queue' message, and 4. The 'Consider the stage filter...' link.

Reserve, pick and issue material

- 1 Use stage cards to separate ready, partial, short and completed demand.
- 2 Filter by request, department, warehouse and status.
- 3 Reserve only usable stock; shortages stay visible as backorders.
- 4 When requests appear, open a row to reserve, pick and issue from a real location.

Steps: 1. Use stage cards to separate ready, partial, short and completed demand. 2. Filter by request, department, warehouse and status. 3. Reserve only usable stock; shortages stay visible as backorders. 4. When requests appear, open a row to reserve, pick and issue from a real location.

Expected result: Usable stock is promised and picked without hiding shortages or issuing twice.

If blocked: If availability is short, leave the shortage visible; never make stock negative.

CARD 12 Use the Issues and returns workspace

Open: Inventory > Issues and returns

Use this when: You need the operational workspace for a stock-out or an internal stock return.

The screenshot shows the 'Stock Issue & Return' workspace. At the top, there's a navigation bar with tabs for Overview, Requests, Purchase, Receive, Inventory, Masters, Reports, Settings, and Legacy & production. Below this, the 'Issues & Returns' section is active. It features a 'Stock Issue & Return' header with a sub-header 'Record material issued out or credited back'. There are four main sections: 'MOVEMENTS' (0), 'STOCK IN' (0), 'STOCK OUT' (0), and 'UNRECORDED' (0). A message states: 'Manufacturing orders are unavailable. Stock adjustments cannot be linked to a manufacturing order at the moment, because ownership of manufacturing orders cannot yet be confirmed. Manual stock adjustments are unaffected. Any manufacturing reference shown on an order record below was captured before this check existed and has not been verified.' Below this is a search bar with the placeholder 'Search by item, MO number, customer or reason...'. To the right of the search bar are filters for 'All' and 'Returns'. The main content area shows 'No issues' and 'Issues and returns' with a 'New Stock' button. Numbered callouts 1-4 point to specific elements: 1 points to the 'Issue' button, 2 points to the search bar, 3 points to the 'Returns' filter, and 4 points to the 'New Stock' button.

Use the Issues and returns workspace

- 1 Choose Issue or Credit stock according to the physical event.
- 2 Search for the exact material or variant before opening a record.
- 3 Use the Issues and Returns filters to confirm the movement direction.
- 4 When records exist, open the result and verify the immutable movement history.

Steps: 1. Choose Issue or Credit stock according to the physical event. 2. Search for the exact material or variant before opening a record. 3. Use the Issues and Returns filters to confirm the movement direction. 4. When records exist, open the result and verify the immutable movement history.

Expected result: Direction, item, variant, quantity, unit and reason match the physical event.

If blocked: If the physical event and selected direction differ, cancel before submitting.

CARD 13 Start and complete a stock count

Open: Inventory > Stock counts

Use this when: Recorded stock must be checked against a physical location and differences controlled.

The screenshot shows the 'Stock counts' page in a web application. The page has a header with navigation links: Overview, Requests, Purchase, Receive, Inventory (active), Masters, Reports, Settings, and Legacy & production. Below the header, there's a breadcrumb trail: Store & Purchase > Stock on hand > Stock Count. The main content area is titled 'Stock counts' with a subtitle 'Count a warehouse location, review the discrepancies, and post one controlled correction.' There are four numbered callouts: 1 points to the 'Location' dropdown menu; 2 points to the 'Count type' dropdown menu (set to 'Normal (expected shown)'); 3 points to the 'Item/SKU filter (optional)' text input field; and 4 points to the 'Count' button. Below the input fields, there's a message: 'No active warehouses yet.'

Start and complete a stock count

- 1 Choose the actual warehouse location being counted.
- 2 Choose Normal or Blind according to control policy.
- 3 Optionally narrow by item or SKU.
- 4 Start only after warehouse setup exists; later review and post differences.

Steps: 1. Choose the actual warehouse location being counted. 2. Choose Normal or Blind according to control policy. 3. Optionally narrow by item or SKU. 4. Start only after warehouse setup exists; later review and post differences.

Expected result: Observations and approved corrections remain auditable.

If blocked: If warehouse structure is missing, ask an administrator to configure it before counting.

CARD 14 Investigate stock movement history

Open: Inventory > Stock movements

Use this when: You need to explain how an item's recorded quantity changed.

The screenshot shows the 'Stock movement history' page in a web application. The page has a header with navigation links: Overview, Requests, Purchase, Receive, Inventory (selected), Masters, Reports, Settings, and Legacy & production. Below the header, there's a sub-header 'STORE & PURCHASE' and 'Stock movements'. The main content area is titled 'Stock movement history' and includes a 'Refresh' button. A section titled 'Choose an item to see its movements' contains a search bar with the placeholder text 'Search a new material by name or SKU...'. Four numbered callouts are present: 1 points to the search bar, 2 points to the search bar, 3 points to the search bar, and 4 points to the search bar. The right side of the image contains a list of instructions corresponding to the callouts.

Investigate stock movement history

- 1 Choose the exact item before interpreting movement history.
- 2 Search by material name or SKU in the item chooser.
- 3 Variant and movement filters appear after an item is selected.
- 4 A filtered net is not the item's complete on-hand balance.

Steps: 1. Choose the exact item before interpreting movement history. 2. Search by material name or SKU in the item chooser. 3. Variant and movement filters appear after an item is selected. 4. A filtered net is not the item's complete on-hand balance.

Expected result: The source document and movement chain explain the quantity change.

If blocked: If the chain is suspicious, open the source record; never edit a posted movement.

CARD 15 Resolve stock exceptions

Open: Inventory > Stock exceptions

Use this when: The system reports a negative balance, placement mismatch or broken stock evidence chain.

Resolve stock exceptions

- 1 Filter by exception type, severity, warehouse or item.
- 2 Open the exception and read its evidence before acting.
- 3 Correct the source event through receipt, transfer, count, return or reversal.
- 4 Use Start stock count when the evidence requires a physical count.

Steps: 1. Filter by exception type, severity, warehouse or item. 2. Open the exception and read its evidence before acting. 3. Correct the source event through receipt, transfer, count, return or reversal. 4. Use Start stock count when the evidence requires a physical count.

Expected result: The source condition is corrected without rewriting posted history.

If blocked: If evidence is insufficient, start a controlled physical count rather than clearing the warning.

CARD 16 Create traceable lot labels

Open: Inventory > Lot labels and barcodes

Use this when: A stored quantity needs a traceable printed label or barcode.

The screenshot shows the 'Lot labels & barcodes' interface. It has a sidebar with a search bar and a list of items. The main area is divided into three sections: '1. Select item', '2. Select variant', and '3. Enter label details'. Callout 1 points to the search bar. Callout 2 points to the 'Quantity per label' field. Callout 3 points to the 'Number of labels' field. Callout 4 points to the 'Create' button at the bottom right.

Create traceable lot labels

- 1 Select the item and exact variant—or Whole item / no variant.
- 2 Enter quantity per label with its unit.
- 3 Enter number of labels; this does not multiply or adjust stock.
- 4 Review the batch, then create and print once.

Steps: 1. Select the item and exact variant—or Whole item / no variant. 2. Enter quantity per label with its unit. 3. Enter number of labels; this does not multiply or adjust stock. 4. Review the batch, then create and print once.

Expected result: Each label identifies a real quantity without changing inventory.

If blocked: Reprinting does not create stock; if quantity is wrong, correct the underlying transaction.

CARD 17 Use the Materials register

Open: Masters > Materials

Use this when: You need to find or review a stock-tracked input item without changing its quantity.

The screenshot shows the 'Materials' register in a software application. At the top, there's a navigation bar with 'Masters' selected. Below it, a 'Materials' header section includes a search bar (callout 1), filters for 'Low stock' (33 items) and 'Out of stock' (78 items), and a '+ Add item' button (callout 4). A table lists materials with columns for item name, category, unit, on-hand quantity, reorder levels, variants, status, last updated, and actions. Callout 2 points to a 'Create PO' button above the table. Callout 3 points to a 'Stock adjustment' icon in the actions column of the first row.

ITEM	CATEGORY	SA UNIT	ON HAND	REORDER LEVELS	VARIANTS	STATUS	LAST UPDATED	ACTIONS
COBRA FILE Item ID: COBRA-350	FILES AND CATALOG	Pcs	0 Pcs	min 1 - max 100	1 1 out of stock	Out of stock	22 Aug 2026	[Icons]
PALLET SUPREME-1200X1000X125MM / 4WAY Item ID: PAL-SUPREME-450	PALLET	Pcs	0 Pcs	min 1 - max 100	1 1 out of stock	Out of stock	19 Aug 2026	[Icons]
GARVA SAREE Item ID: GARVA-362	SAREE	Pcs	0 Pcs	min 1 - max 100	1 1 out of stock	Out of stock	11 Aug 2026	[Icons]
KUMUM SAREE Item ID: KUMUM-364	SAREE	Pcs	0 Pcs	min 1 - max 100	1 1 out of stock	Out of stock	11 Aug 2026	[Icons]
NAVYA SAREE Item ID: NAVYA-367	SAREE	Pcs	0 Pcs	min 1 - max 100	1 1 out of stock	Out of stock	11 Aug 2026	[Icons]

Use the Materials register

- 1 Search and filter by identity, stock status, category or type.
- 2 Open an item for variants, reorder policy, supplier references and movements.
- 3 Use Stock adjustment for opening or corrected stock—not the master form.
- 4 Add item creates reusable material identity only.

Steps: 1. Search and filter by identity, stock status, category or type. 2. Open an item for variants, reorder policy, supplier references and movements. 3. Use Stock adjustment for opening or corrected stock—not the master form. 4. Add item creates reusable material identity only.

Expected result: The existing material is found or a genuine master-data gap is confirmed.

If blocked: If an item looks similar, compare code, variant and base unit before creating another.

CARD 18 Create a material master record

Open: Masters > Materials > Add item

Use this when: A genuinely new reusable material identity is required and no duplicate exists.

Create a material master record

- 1 Enter a clear item name; the stable internal code is assigned on save.
- 2 Choose product type, category and base unit.
- 3 Confirm the base unit used for every stock quantity on this item.
- 4 Use the on-screen guide: current stock is entered through Stock adjustment, not here.
- 5 Use Add item only after reviewing the remaining sections below.

Steps: 1. Enter a clear item name; the stable internal code is assigned on save. 2. Choose product type, category and base unit. 3. Confirm the base unit used for every stock quantity on this item. 4. Use the on-screen guide: current stock is entered through Stock adjustment, not here. 5. Use Add item only after reviewing the remaining sections below.

Expected result: A stable material identity exists with no invented opening balance.

If blocked: If category, base unit or budget classification is uncertain, save nothing and ask the master-data owner.

CARD 19 Read finished products and BOM context

Open: Masters > Finished products and BOM

Use this when: You need production-owned finished-product identity or BOM context.

The screenshot shows the 'Finished products & BOM' page. At the top, there's a search bar (1) and filters for 'Category' (2) and 'Recorded status' (3). Below is a table of products. The first row is 'Gardener Shirt' (2). The 'Contents' column for this row shows '1 variant', '2 BOM materials', and '0 operations' (3). The 'Lifecycle' column shows 'Active' and the 'Updated' date is '03 Sept 2026'. The 'Open' action icon (4) is in the rightmost column. The table lists several other products like 'Fancy Hoodie', 'Sourpax Jacket', 'Formal T-shirt', 'Jadeger Pant', 'Sourpax Pant', 'Tactical T-shirt', 'Sourpax T-shirt', and 'Woman Fancy Shirt'.

Read finished products and BOM context

- 1 Search the production-owned finished-product catalogue.
- 2 Choose the correct product row and then its variant.
- 3 Read BOM material requirements for planning and traceability.
- 4 Use the row's open action to inspect; make engineering changes in Production.

Steps: 1. Search the production-owned finished-product catalogue. 2. Choose the correct product row and then its variant. 3. Read BOM material requirements for planning and traceability. 4. Use the row's open action to inspect; make engineering changes in Production.

Expected result: The correct product and BOM are understood without duplicating production master data.

If blocked: Engineering changes belong in Production, not in the Store material master.

CARD 20 Maintain supplier identity

Open: Masters > Suppliers

Use this when: You need to find or maintain the legal and operational identity of a supplier.

The screenshot shows the 'Suppliers' page in the GRAV Store system. At the top, there's a navigation bar with tabs like Overview, Requests, Purchase, Receive, Inventory, Masters, Reports, Settings, and Legacy & production. Below this, the 'Suppliers' section has a header with a search bar and an '+ Add supplier' button. A summary bar shows 'Total suppliers: 1', 'Active suppliers: 1', 'Backorder: 0', and 'Archived: 0'. A search bar is labeled '1'. Below it, a table lists suppliers with columns: SUPPLIER, TYPE, PRODUCTS, ASSESSMENT, and ACT. The first row is 'Costing Demo Supplier' with type 'Raw Material Supplier'. Callout '2' points to the 'TYPE' column. Callout '3' points to the 'ASSESSMENT' column. Callout '4' points to the 'ACT' column. Below the table, there's a 'Supplier types' section with filters for Fabric Suppliers, Raw Material Suppliers, Accessories Suppliers, Packaging Suppliers, Equipment Suppliers, Logistics, and Other Services.

Maintain supplier identity

- 1 Search for duplicates before adding a supplier.
- 2 Open the supplier row to review legal, tax and contact information.
- 3 Use lifecycle status instead of deleting historical suppliers.
- 4 Use the row actions to open sourcing and order evidence.

Steps: 1. Search for duplicates before adding a supplier. 2. Open the supplier row to review legal, tax and contact information. 3. Use lifecycle status instead of deleting historical suppliers. 4. Use the row actions to open sourcing and order evidence.

Expected result: Purchasing records refer to one controlled supplier identity.

If blocked: If a possible duplicate exists, resolve it before adding a new supplier.

CARD 21 Compare dated supplier offers

Open: Masters > Supplier offers

Use this when: A sourcing or costing decision needs dated commercial evidence from suppliers.

Compare dated supplier offers

- 1 Separate Material, Outside service and Freight offers.
- 2 Filter by state and currency; search supplier or item identity.
- 3 Compare purchase unit, quoted price, tax basis, MOQ, lead time and validity.
- 4 Open the offer row for its complete commercial evidence.

Steps: 1. Separate Material, Outside service and Freight offers. 2. Filter by state and currency; search supplier or item identity. 3. Compare purchase unit, quoted price, tax basis, MOQ, lead time and validity. 4. Open the offer row for its complete commercial evidence.

Expected result: The commercial decision is supported by comparable, current evidence.

If blocked: If validity or unit basis is missing, the offer is not comparable; obtain corrected evidence.

CARD 22 Record a supplier quotation

Open: Masters > Supplier offers > New offer

Use this when: A new quotation must be recorded against the exact supplier and item or service.

Record a supplier quotation

- 1 Confirm that Step 1 is Supplier and item.
- 2 Search and select the exact supplier.
- 3 Select the exact item and variant from the master.
- 4 Record the supplier's item code and the purchase unit.
- 5 Continue through price, quantity, validity and review before saving.

Steps: 1. Confirm that Step 1 is Supplier and item. 2. Search and select the exact supplier. 3. Select the exact item and variant from the master. 4. Record the supplier's item code and the purchase unit. 5. Continue through price, quantity, validity and review before saving.

Expected result: A dated and attributable quotation can support sourcing or costing.

If blocked: If supplier, currency, unit or validity is unknown, do not invent it.

CARD 23 Maintain units and conversions

Open: Masters > Units of measure

Use this when: A controlled unit or defensible conversion is missing from master data.

Maintain units and conversions

- 1 Enter the full unit name after confirming it does not already exist.
- 2 Add conversions only when another compatible unit is available.
- 3 Use the examples as guidance; every conversion is independent and must be defensible.
- 4 Review the name and conversions, then use Create unit once.

Steps: 1. Enter the full unit name after confirming it does not already exist. 2. Add conversions only when another compatible unit is available. 3. Use the examples as guidance; every conversion is independent and must be defensible. 4. Review the name and conversions, then use Create unit once.

Expected result: Quantities retain a valid and explainable measurement basis.

If blocked: If no valid conversion exists, add one only with defensible business evidence.

CARD 24 Review warehouses and operational locations

Open: Masters > Warehouses

Use this when: You need to review the company's physical facilities and operational locations.

The screenshot shows the 'Warehouses & locations' page in a software application. The page has a header with navigation tabs: Overview, Requests, Purchase, Receive, Inventory, Masters, Reports, Settings, and Legacy & production. Below the header, there's a sub-header 'Warehouses' and a section 'STORE CONFIGURATION' with the title 'Warehouses & locations'. A note states: 'Where stock is kept, and the internal locations inside each warehouse.' Below this, there's a toggle switch for 'Your company's warehouses' (active) and 'Legacy records'. A search bar is labeled 'Search' and 'Warehouse name or code'. A status filter is set to 'All statuses'. A message says 'No warehouse is yet here stock is kept.' with an 'Add warehouse' button. Four numbered callouts point to specific elements: 1 points to the 'Your company's warehouses' toggle, 2 points to the search bar, 3 points to the 'Add warehouse' button, and 4 points to the 'Add warehouse' button.

Review warehouses and operational locations

- 1 Switch between your company's warehouses and legacy records deliberately.
- 2 Search by warehouse name or code and filter by status.
- 3 When a row exists, open it to review receiving, inspection, usable, quarantine and returns locations.
- 4 Use Add warehouse only when the physical facility is defined.

Steps: 1. Switch between your company's warehouses and legacy records deliberately. 2. Search by warehouse name or code and filter by status. 3. When a row exists, open it to review receiving, inspection, usable, quarantine and returns locations. 4. Use Add warehouse only when the physical facility is defined.

Expected result: Transactions can point to the place where stock physically exists.

If blocked: If a warehouse appears only under legacy records, ask the administrator before new use.

CARD 25 Create warehouse structure

Open: Masters > Warehouses > Add warehouse

Use this when: A real physical facility is ready to be represented in Store.

Create warehouse structure

- 1 Enter a clear name and short company-unique code.
- 2 Record address and operational contact information.
- 3 Capacity describes the facility; it is not stock quantity.
- 4 Review the standard locations that will be created automatically.
- 5 Add only after the physical structure is correct.

Steps: 1. Enter a clear name and short company-unique code. 2. Record address and operational contact information. 3. Capacity describes the facility; it is not stock quantity. 4. Review the standard locations that will be created automatically. 5. Add only after the physical structure is correct.

Expected result: The facility and its standard locations are ready for controlled use.

If blocked: Do not create a warehouse as a substitute for an internal bin or temporary stock state.

CARD 26 Trace demand in the material request register

Open: Reports > Request report

Use this when: You need to analyse demand, ageing or incomplete request fulfilment over a defined scope.

The screenshot shows the 'Material request register' page. At the top, there's a navigation bar with 'Requests' selected. Below it, a summary section shows counts for 'Requests on record', 'Awaiting team lead', 'Approved - with Store', 'Issued or partly issued', and 'Store closed'. A search bar is present with filters for 'Any status', 'Any type', 'Any source', and 'Any priority'. The main content area shows a message: 'No material requests on record'. Callout 1 points to the filter dropdowns. Callout 2 points to the search bar. Callout 3 points to the 'No material requests on record' message. Callout 4 points to the 'Open request desk' button.

Trace demand in the material request register

- 1 Set status, type, source and priority filters first.
- 2 Read the population-scope sentence before using counts.
- 3 When requests exist, open their lines to follow reservations, POs, receipts or issues.
- 4 Open Request desk to start or continue live workflow.

Steps: 1. Set status, type, source and priority filters first. 2. Read the population-scope sentence before using counts. 3. When requests exist, open their lines to follow reservations, POs, receipts or issues. 4. Open Request desk to start or continue live workflow.

Expected result: The result can be explained by its visible filters and source requests.

If blocked: If totals look unexpected, clear filters and read the population-scope sentence.

CARD 27 Use the movement report

Open: Reports > Movement report

Use this when: You need period-based movement activity or source-document reconciliation.

The screenshot shows the 'Movement report' interface in the GRAV Store system. At the top, there's a navigation bar with 'Reports' selected. Below it, the 'Movement report' title is displayed. The main area contains a summary section with filters for 'From' (06/09/2026) and 'To' (06/09/2026), and a 'Transaction type' dropdown set to 'All transactions'. A search bar is also present. Below the filters, there are four summary cards: 'MOVEMENTS' (0 items touched), 'TOTAL IN' (0 credits, returns & receipts), 'TOTAL OUT' (0 items), and 'NET MOVEMENT' (0 stock grow). A 'VALUE MOVED' card shows '0' with a note 'When a unit price was recorded'. Below these cards, a message states 'No material moved in this period. Nothing recorded on 2026-09-06. Try a wider range.' At the bottom, there is a 'Transaction ledger' table with columns: WHEN, ITEM, TYPE, QTY, BEFORE, AFTER, REASON, REFERENCE, VALUE, BY. A note below the table says 'No movements match these filters.'

Use the movement report

- 1 Choose period, transaction type and search scope.
- 2 Read movement totals and value moved as separate measures.
- 3 When rows exist, drill to source documents for unusual movements.
- 4 Do not call the filtered net movement an on-hand balance.

Steps: 1. Choose period, transaction type and search scope. 2. Read movement totals and value moved as separate measures. 3. When rows exist, drill to source documents for unusual movements. 4. Do not call the filtered net movement an on-hand balance.

Expected result: Movement activity is reconciled without combining unlike units.

If blocked: Do not treat filtered net movement as current on-hand stock.

CARD 28 Work the purchase exception queue

Open: Reports > Purchase exceptions

Use this when: Orders, receipts, bills or service records are overdue, mismatched or blocked.

The screenshot shows the 'Purchase exceptions' report in a software application. At the top, there's a navigation bar with tabs like Overview, Requests, Purchase, Receive, Inventory, Masters, Reports (active), Settings, and Legacy & production. Below the navigation bar, the report title 'Purchase exceptions' is displayed, followed by a subtitle: 'Orders where approval, receipt and billing do not yet agree - what needs attention, why, and where to resolve it.' A summary section shows various counts: Orders needing attention (0), POs expected delivery (0), POs to receive (0), Invoices without a bill (0), Bills awaiting posting (0), Invoices in arrears (0), and Invoices release exceptions (0). Below this, a search bar is present with a placeholder 'PO number, supplier or request number'. To the right of the search bar are filters for 'Exception' (set to 'All exceptions'), 'Order status' (set to 'Any status'), and 'Show' (set to 'Needs attention'). A large empty box below the filters contains the text 'Nothing to attend' and a note: 'Every inspected order has approval, receipt and billing in agreement on the recorded fields. Switch "Show" to all inspected orders to review them anyway.' Four numbered callouts are present: 1 points to the search bar, 2 points to the 'Exception' filter, 3 points to the 'Nothing to attend' message, and 4 points to a refresh icon in the top right corner of the report area.

Work the purchase exception queue

- 1 Filter by search, exception, order status and attention state.
- 2 When an exception exists, open its PO, receipt, service order or voucher evidence.
- 3 Correct the actual condition instead of merely closing the warning.
- 4 Refresh and confirm the exception clears or records a remaining reason.

Steps: 1. Filter by search, exception, order status and attention state. 2. When an exception exists, open its PO, receipt, service order or voucher evidence. 3. Correct the actual condition instead of merely closing the warning. 4. Refresh and confirm the exception clears or records a remaining reason.

Expected result: The actual blocker has an owner and a verifiable resolution path.

If blocked: Correct the source record, then refresh; do not merely dismiss the symptom.

CARD 29 Review management inventory valuation

Open: Reports > Inventory valuation

Use this when: Management needs inventory value, evidence coverage and missing-cost visibility.

The screenshot displays the SAP Inventory Valuation screen. The top navigation bar includes tabs for Overview, Requests, Purchase, Reserve, Inventory, Masters, Reports, Settings, and Legacy & production. The main header shows 'Store & Purchase' and 'Inventory valuation'. The 'Inventory valuation' section provides a summary of the weighted average value of stock on hand, recorded movements, and a refresh button. Below this, a note explains that the weighted-average value is derived from recorded stock receipts and movements, plus landed costs (freight, insurance, customs, etc.) allocated from posted supplier bills, accurate GST and other non-acquisition charges are included. This is a management valuation, not final product cost.

The summary section displays four key figures:

- Known inventory value:** **₹6,36,523.09** (Note: Base ₹6,36,523.09 + landed ₹5. A flow from valued stock - not a total)
- Completely valued items:** **167**
- Items with landed cost:** **10**
- Partly unvalued:** **5**
- Indeterminate value:** **5**
- Balance mismatches:** **85**

The 'STOCK ON HAND, BY UNIT' section shows a table of stock on hand by unit, including columns for Unit, Quantity, Gross, Net, and Net Weight. The table lists units such as 1 Box, 200 Feet, 100 Gram, 1 Inch, 461.8798 Kilogram, 4.5 Liter, 0.461304 Meter, 1 Millimeter, 0 Millibar, 154.34554 MPa, and 7 Nov.

The 'Search' section includes a search bar and filters for Category (All categories) and Sort (Item name).

The 'Items' section displays a table of items, including columns for Item, Description, On hand, Req cost, Known value, and Valued. The table lists items such as 1 Way Metal MCB Board and 10 MM DRILL DIE (32MM BIT).

Four numbered callouts highlight specific features:

- Read the valuation-basis note before interpreting the figures.
- Read known value, completeness and mismatch figures separately.
- Expand an item row to inspect receipt and landed-cost evidence.
- Use Partly unvalued and Indeterminate filters; missing evidence is not zero cost.

Steps: 1. Read the valuation-basis note before interpreting the figures. 2. Read known value, completeness and mismatch figures separately. 3. Expand an item row to inspect receipt and landed-cost evidence. 4. Use Partly unvalued and Indeterminate filters; missing evidence is not zero cost.

Expected result: Value is read together with method, coverage and limitations.

If blocked: Missing cost evidence is unknown, not zero; resolve receipt or landed-cost evidence.

CARD 30 Review Store operating settings

Open: Settings

Use this when: An administrator must change future Store document identity or operating defaults.

Review Store operating settings

- 1 Read which generated documents these Store details affect.
- 2 Enter the Store address in the order it should print.
- 3 Use PDF preview to verify the printed identity before saving.
- 4 Continue to Contact details below and save only verified information.

Steps: 1. Read which generated documents these Store details affect. 2. Enter the Store address in the order it should print. 3. Use PDF preview to verify the printed identity before saving. 4. Continue to Contact details below and save only verified information.

Expected result: The change is verified, documented and effective from a known point.

If blocked: If downstream document impact is unclear, do not save until Finance and Store owners agree.

CARD 31 Use legacy screens only for history

Open: Legacy and production > Purchase forms legacy

Use this when: Historical purchase-form evidence must be read; never use it to begin new work.

The screenshot shows the 'Purchase forms — legacy' interface. At the top, there's a navigation bar with tabs like Overview, Requests, Purchase forms, Receive, Inventory, Masters, Reports, Settings, and Legacy & production. Below this, a header section contains a search bar and a 'Open the Request Desk' link. The main area displays a list of purchase forms with columns for Item, Qty, Unit, Vendor, Price, and Total. Callout 1 points to the search bar. Callout 2 points to the 'Forms shown' and 'Items created this month' summary cards. Callout 3 points to the 'View' and 'PDF' buttons for a specific form. Callout 4 points to the 'Open the Request Desk' link.

Use legacy screens only for history

- 1 Search or filter historical records when evidence is required.
- 2 Read the shown-record counts and scope honestly.
- 3 Use View or PDF on the row without creating new work.
- 4 Use the notice link to start all new demand in Request desk.

Steps: 1. Search or filter historical records when evidence is required. 2. Read the shown-record counts and scope honestly. 3. Use View or PDF on the row without creating new work. 4. Use the notice link to start all new demand in Request desk.

Expected result: Historical evidence remains readable while new work begins in Request desk.

If blocked: For new demand, leave this screen and use Request desk.

Problem to action

Search the exact words shown on screen. Do not repeatedly retry a refusal whose cause requires data, permission or another person's action.

Problem or message	What it usually means	What to do next
Nothing appears in a register	Filters, date scope, company scope or the wrong register may hide it.	Clear filters; search exact number; confirm status and owning register; refresh once.
Action is hidden	Your role, capability or the record's status does not permit it.	Confirm role and workflow state. Ask the owner; never use another login.
Staff record not linked	The sign-in can read some registers but cannot be named in an audited mutation.	Ask an administrator to link the account to the correct employee record.
Insufficient stock	Available usable stock is below the requested quantity.	Check reservations, location and variant; leave shortage visible or route to purchase.
Unit conversion missing	The requested and native units have no approved conversion.	Stop the transaction and ask the unit-master owner to add verified conversion evidence.
Item or variant not found	The request and master identities do not match.	Search code and variant; do not choose a similar name or create a duplicate casually.
Budget mapping unresolved	Finance has not mapped the item or service to a budget head.	Keep the commercial document in Draft and send the exact identity to Finance.
Budget unavailable	The mapped head does not have enough available budget or the check failed.	Do not bypass. Ask Budget or Finance to review allocation, period and commitment.
Receipt cannot be accepted	PO, quantity, inspection, unit or location evidence is incomplete.	Keep the receipt pending or quarantine the goods until the factual mismatch is resolved.
Service cannot be accepted	Completion evidence is missing or the requester disagrees.	Requester records rework required with a reason; Store does not create a GRN.

Problem to action continued

Problem or message	What it usually means	What to do next
Negative balance or stock exception	A source movement, placement or document chain needs investigation.	Open the exception, trace evidence, then correct by receipt, transfer, count, return or reversal.
Accepted stock has no location	Receipt exists but put-away is incomplete.	Use the receipt or put-away workflow; do not invent a warehouse on the movement.
Duplicate SKU or supplier	A similar master identity already exists.	Compare stable code, tax/legal identity, unit and lifecycle; merge or reactivate through the owner.
Valuation is partly unvalued	Some stock lacks sufficient receipt or cost evidence.	Expand affected items; repair receipt and landed-cost evidence. Unknown is not zero.
Totals differ after filtering	The screen is showing a selected population, not the whole company or balance.	Read the scope sentence and clear filters before reconciling totals.
Submit result is uncertain	The response may have been interrupted after the server acted.	Refresh and inspect status/history before resubmitting. Reuse retry only where the screen supports it.
Legacy record only	The evidence predates the current workflow or lacks current company structure.	Read it for history. Start all new demand in Request desk.
Page says retry but retry never helps	The refusal needs identity, master data, permission or another owner.	Capture the exact message and record number; send it to the owning team listed below.

Status words that matter

Area	Status	Employee meaning
Request	Pending approval	No fulfilment action should start yet.
Request	Approved	Store may classify and route lines according to authority.
Request	Reserved / Picked / Issued	Promised / physically staged / physically left Store - not interchangeable.
Purchase order	Draft	Editable preparation; not yet a supplier commitment.
Purchase order	Issued	Supplier-facing commitment; correct by supported amendment or cancellation.
Purchase order	Partly received / Completed	Some / all ordered physical quantities have valid receipt evidence.
Goods receipt	Pending inspection	Arrival recorded; quantity is not yet usable stock.
Goods receipt	Accepted / Quarantined / Rejected	Usable / isolated pending decision / not accepted into usable stock.
Service order	Completion reported	Supplier claims work is complete; requester must decide.
Service order	Accepted / Rework required	Requester accepts result / sends it back with a reason.
Stock count	Open / Posted / Cancelled	Counting in progress / approved differences recorded / no correction posted.
Valuation	Partly unvalued / Indeterminate	Some cost missing / evidence cannot support a reliable figure.

Who owns the next action

Issue	Primary owner	Send this evidence
Request purpose, quantity or approval	Requester or approver	Request number, line and required date
Item, variant, category or base unit	Material master owner	Item code, proposed correction and source evidence
Supplier identity or quotation	Buyer or sourcing	Supplier, offer date, currency, unit and validity
Budget head or availability	Budget or Finance	Request/PO, item or service identity, amount and period
Receipt quantity or condition	Store receiver	PO, receipt, line, physical count, photos where relevant
Warehouse or location	Inventory controller or administrator	Warehouse, location, item and physical position
Service result	Requester	Service order, completion evidence and rework reason
Supplier voucher, tax or payment	Accounting	PO/service order, receipt/acceptance, invoice and charge details
Role or staff-account link	Administrator or HR	Sign-in email, employee identity and required role
System error	Application support	Exact message, page, record number, time and what happened before it

Minimum escalation message

State: I was on [page], working on [record number]. I selected [action]. The system showed [exact message] at [time]. I refreshed once and confirmed [current status]. No further submission was made.

Use the full handbook when

- You are onboarding to a role rather than completing one immediate task.
- A cross-application question involves Budget, Accounting, Production or costing policy.
- An unusual historical, audit, correction or reconciliation case is not covered by a task card.
